SUMMARY

Software developer focused on web, full-stack, and interactive products that combine technical problem-solving with thoughtful user experience. Experienced in React, Next.js, Node.js, MongoDB, WordPress, responsive UI development, authentication workflows, and team-based software projects. Game development experience supports strong creative, systems-thinking, and user-centered design skills.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Java, C, C++, SQL, HTML/CSS, PHP
Frontend: React, Next.js, Tailwind CSS, JavaFX, Elementor, Spectra, Leaflet, Google Maps API
Backend / Databases: Node.js, Express.js, MongoDB, Mongoose, PostgreSQL, Passport.js, WP Data Access
Game / Interactive: Unreal Engine 5, Blueprints, Behavior Trees
Tools: Git, GitHub, Jira, GitHub Projects, Docker, Vercel, Figma, WAMP, Gradle, IntelliJ, Eclipse, WebStorm
Methods: Agile, Scrum, responsive design, UI documentation

EDUCATION

Worcester Polytechnic Institute | Worcester, MA **August 2021 - August 2025**
B.S. in Computer Science; Minor in Interactive Media & Game Development
Relevant Coursework: Software Engineering, Webware, Mobile & Ubiquitous Computing, Operating Systems, Object-Oriented Analysis and Design, Database Systems, Human-Computer Interaction, Cryptography & Communication Security

PROFESSIONAL EXPERIENCE

ICT Intern | Betting Gaming & Lotteries Commission | September 2025 - Present

- Support the development of a WordPress-based intranet migration from Drupal, building four responsive intranet pages for a company of 121 users.
- Build reusable page components with Elementor, Spectra, custom PHP, CSS, and JavaScript for announcements, events, department content, and staff resources.
- Reduce manual layout work by dynamically loading intranet content into reusable card components instead of manually positioning information.
- Configure and test features in a local WAMP development environment before deployment.
- Use WP Data Access and role-based content management to support structured backend content workflows.

Advancing Black Pathways Fellow | JPMorgan Chase & Co. | June 2023 - August 2023

- Assessed a company problem during a Business Sprint Project and presented actionable recommendations to peers, mentors, and senior company leaders.
- Developed attack and defense strategies for virtual robots using Robocode, strengthening algorithmic thinking through competitive simulations.
- Built a full-stack MVP during a technical primer, implementing front-end and back-end components in a fast-paced learning environment.

IT Department Intern | Appliance Traders Limited Jamaica | July 2022 - August 2022

- Provisioned and configured desktops and laptops for new hires, supporting smooth onboarding and device readiness.
- Delivered desktop support, software installation, domain integration, and troubleshooting across departments.

SELECTED PROJECTS

StickAPin | Node.js, Express, MongoDB, Passport.js, Vercel | <https://stickapin.app/>

- Built and launched a full-stack task management platform with board and calendar views for organizing workflows.
- Designed RESTful APIs and MongoDB/Mongoose data models to support task, board, calendar, and user account features.
- Implemented secure authentication and account workflows, including sessions, OAuth, email verification, password reset, CSRF protection, rate limiting, secure session cookies, password hashing, and input validation.
- Developed productivity features including task CRUD, focus sessions, notifications, and Vercel deployment workflows.

Plates of Power / Project Boca | Unreal Engine 5, Blueprints, Behavior Trees

- Contributed to a senior Major Qualifying Project at Worcester Polytechnic Institute, developing a 3D single-player isometric roguelite focused on dynamic combat, narrative progression, and cultural representation.
- Helped build gameplay-facing systems in Unreal Engine 5, including enemy AI behavior and combat interactions.

- Used Blueprints, Behavior Trees, AI perception, and NavMesh-based movement to support enemy behavior and combat encounters in a cross-disciplinary game team.

Hospital Kiosk Web Application | React, Tailwind CSS, PostgreSQL, Auth0, Docker, AWS

- Served as Assistant Lead Software Engineer on a team web application for hospital navigation, service requests, employee workflows, and kiosk-based information pages.
- Implemented user-facing features including pathfinding input fields, a language service request form, map panning and zooming support, success notifications, About page interactions, and a Credits page.
- Collaborated in an Agile team environment using GitHub, Jira, Docker, reusable React components, and documented sprint workflows.

Boston Freedom Trail Web App | React, Next.js, MongoDB, Leaflet | <https://freedom-trail-tour.vercel.app/>

- Collaborated on a mobile-first React and Next.js application guiding users along the Boston Freedom Trail with interactive location features.
- Designed authentication pages, implemented a badge system, contributed to live location tracking with Leaflet, and integrated Google Maps API and MongoDB for location-based data.

CERTIFICATIONS

Certifications: AI Fluency: Framework & Foundations, Anthropic (June 2026); J.P. Morgan Software Engineering Virtual Experience Program on Forage (May 2023); Business Case Development, Harvard Business Publishing (July 2023)
